TRADING COMPANY

About Honam Trading Company:

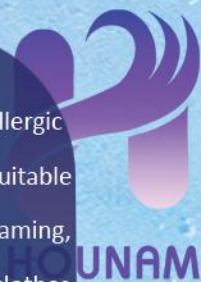

The brand Hounam is one of the leading companies in the production of cleaning products and is recognized as a leader in this industry. Hounam's products are known as pioneers in the field because they use the latest technologies and production methods to offer consumers products with the best quality and efficiency. Moreover, Hounam is committed to environmental protection and prioritizes customer health and satisfaction by using high-quality raw materials. The experienced team at Hounam strives to provide a pleasant and exceptional shopping experience by offering high-quality products with unmatched performance at reasonable prices.

Handwashing Laundry Powder

The formula of handwashing laundry powders is designed to prevent potential skin damage and allergic reactions, making them safe to use by hand. These powders dissolve easily in cold water and produce a suitable amount of foam. The presence of minerals like sodium carbonate in the formulation enhances foaming, especially in cold water, ensuring high solubility. The aromatic essences in handwashing powder make clothes smell fresh, while anionic active agents provide excellent stain removal and cleaning properties, resulting in brighter clothing.

Machine Laundry Powder

Laundry powders for washing machines have completely different compositions compared to handwashing powders. These powders contain various enzymes, each serving a specific purpose, not only improving the cleanliness of clothes but also affecting the washing machine's performance. The cleaning and stain-removing power of machine laundry powders is very high, and in some special cases, they can be used with gloves to remove stains from certain surfaces with great precision.

Laundry Liquid

Laundry liquid is one of the best options for all types of clothes. Its main function is to clean various fabrics and remove stains. Using laundry liquid is more efficient than powder since less liquid is needed per wash. Laundry liquid has exceptional stain-removing and cleaning power. Its advanced formula contains enzymes that penetrate and remove even the toughest stains without damaging the fabric's structure, even after repeated washes.

Soap Powder

Machine laundry soap powder contains a unique composition that provides exceptional cleanliness without causing any skin irritation. Its formula is specifically designed for sensitive skin, making it one of the most popular products. This powder is suitable for washing various types of clothing, curtains, towels, sheets, and children's clothes. It is enzyme-free, which helps protect fabric fibers from wear and fading. Additionally, it ensures clean, bright and shiny clothes with a pleasant scent without damaging the fabric's texture.

A large, light blue plastic container of washing powder with a white label that reads "WASHING POWDER" in bold, black, serif font. In front of the container is a clear plastic cup filled with white powder, speckled with small purple and pink particles. The background is a dark blue gradient with white water droplets and bubbles.

Handwashing Liquid

Liquid soap, or handwashing liquid, is essentially a more advanced form of natural soap. Its formulation includes sodium or potassium salts of fatty acids, along with chemicals such as potash, caustic soda, vegetable oils, flower extracts for fragrance, and industrial alcohol. The main difference between handwashing liquid and traditional soap lies in the more complex formulation of liquid soap. It is specifically designed for cleaning hands, but depending on its composition, it may offer various features. Hounam's well-known brand offers different types of handwash for children, people with dry or sensitive skin, glycerin-based, antibacterial, alcohol-based, and non-alcohol-based options.

Dishwashing Liquid

Dishwashing liquid is a foam-generating substance designed to remove grease and food residues from dishes. A different type of dishwashing liquid is used for dishwashers. Dishwasher detergents come in various forms, including cartridges, gels, liquids, packs, powders, and tablets.

Bath Soap

The primary function of bath and facial soap is to clean the skin. Soaps contain emulsifying agents that help remove dirt and oils from the skin. Everyone desires clean and healthy skin. Bath soaps include certain antibacterial ingredients that kill bacteria and prevent them from multiplying on the skin. Our skin is constantly exposed to dust, pollution, and more, all of which affect it significantly. Using soap is essential for maintaining clean and healthy skin.

HOUNAM

Fabric Bleach

Fabric bleach is a powerful solution not only used to whiten and brighten clothes and remove stains but also recognized today as a disinfectant for fighting bacteria and viruses. Hounam offers a competitive fragrant bleach that rivals foreign brands. This bleach is known for its high cleaning and stain-removing power, minimal fabric damage, pleasant scent, skin compatibility, affordable price, and high quality.

Stain remover and Bathroom Cleaner

Lime scale is a combination of calcium sulfate, carbonate, and magnesium that forms a white, powdery residue similar to lime on the surfaces of pipes and areas where water remains stagnant. Removing these unsightly deposits is a significant concern for many people. Descalers are products available in liquid (often thick liquid) or powder form, used to eliminate stains and deposits from various surfaces and devices. Hounam's descaler not only excels in cleaning and disinfecting but also stands out with its unique features, such as high and fast performance, lack of unpleasant odor, and the ability to clean various surfaces with greater efficiency than ever before, perfectly meeting your needs.

Today, packaging is not just a protective cover but a representative of a manufacturing unit worldwide. Hounam, with its extensive knowledge and experience in producing detergents, offers unique and attractive packaging for its customers. Hounam's expert and professional team guarantees that every product is delivered in the desired volume and quality, in suitable packaging, and at competitive prices to meet the needs of valued customers.
